ALEXANDRE TEIXEIRA

AI Engineer

alexandretei13@gmail.com ◇ +33 7 86 01 55 04 ◇ **LinkedIn** ◇ **GitHub** ◇ **Portfolio** ◇ Paris, France

0→1 AI Engineer — I turn complex business problem statements into AI products that get deployed and adopted. My approach: understand the workflow, simplify the problem, and build from idea to impact.

Education

•University of Technology of Compiègne (UTC) ***2022 – 2026***
Master's-level Engineering Degree (Diplôme d'Ingénieur), Computer Science Compiègne
– Artificial Intelligence, optimization, operations research, logic & search-based problem solving.
– Additional coursework: Psychology of Learning, Project Management, and Responsible Innovation Marketing.

•Shanghai University — UTSEUS ***2024 – 2025***
Exchange Program in Artificial Intelligence Shanghai
– Natural Language Processing, Generative AI, Data Analysis, Data Visualization.

Professional Experience

•AI Engineer, SNCF · Internship ***Sept. 2025 – Feb. 2026***
Multimodal AI Platform for Meeting Summarization Paris
– RFIs, video calls and in-room meetings were buried in hours of audio no team had time to review.
– Built the **platform 0→prod**: transcription, speaker diarization, summarization, plus key-slide detection and VLMs for visual context (React, Python, Azure AI Services, Docker, Jenkins).
– 90% of audio processed in < 5 min; adopted across teams.
– Technical reference for the team on AI direction: **led an RFI** across 15 AI vendors (**Mistral AI, IBM, LinkUp, Vespa**) and the internal rollout of **Mistral Code**.

•AI Engineer — Junior-Enterprise Mission, Renault / Alpine ***Mar. 2025 – Jun. 2025***
AI Whiteboard for Scaling FMEA Workflows Compiègne
– FMEA risk analysis was manual and expert-bound, capping how many workflows could be covered.
– Built an AI-augmented collaborative whiteboard: LLM + RAG propose risks, causes and actions, experts validate.
– Industrialized inference on an **8× NVIDIA A100** cluster with vLLM and load balancing.

•AI Engineer, SNCF · Internship ***Sept. 2023 – Feb. 2024***
GenAI Assistant Automating L1 DevOps Support Lyon
– The group was exploring where GenAI could pay off; I found the need in L1 DevOps support, where repetitive ServiceNow tickets were handled manually.
– Scoped the use case and built the RAG assistant **solo from 0→1**, architecture to deployment; MVP in 3 months.
– 82% of L1 tickets resolved automatically; **3,000+ monthly users**, 25-person team, featured on BFM Business.
– The product then grew group-wide **into SNCF GPT**, still running today on the architecture I designed.

Selected Projects

•CNN vs. Transformer Architectures for 3D Medical Imaging — with UCL ***Feb. 2026 – Present***
University College London — benchmarking performance, complexity and inference constraints.

•On-Prem LLM Platform for UTC Students ***Feb. – Jul. 2025***
Self-hosted LLM platform (OpenWebUI + Ollama, RTX 5090) on UTC's servers, open to all students.

•AlphaZero from Scratch — Gopher & Dodo Games ***2024***
MCTS, self-play and deep RL; PyTorch residual network with policy and value heads.

Technical Skills

AI / LLM Engineering: PyTorch, Hugging Face, vLLM, LangChain, RAG, embeddings, vector databases, VLMs
Machine Learning: CNNs, Transformers, ResNet, Scikit-learn, model training & evaluation
Cloud / DevOps: Azure AI Services, Azure OpenAI, Docker, Kubernetes, Jenkins, GitLab CI/CD
Software: Python, React, FastAPI, PostgreSQL, REST APIs, SQL, Pandas, NumPy

Languages & Leadership

•Languages — French (native) · English (professional) · Chinese (basic).
•Partnership Manager, Imaginarium Festival — sponsorships for a 600,000 EUR student festival. ***2022 – 2023***
•Founder Breakfast, Shanghai — engaged with startup founders on AI-driven innovation. ***2024 – 2025***
